

Built for the moment your plan changes.

Algorithms calculate and optimize; AI discovers and highlights; humans decide. **The result: faster, clearer decisions when it matters most.**

Every plan meets change: new demand lands, work slips, capacity shifts, priorities move. aengine keeps strategy, budget, and capacity in sync, so leaders see the impact of a change and decide in the room, not weeks later. It is the decision layer above the tools you already use, powered by algorithms, assisted by AI, and refined since 2017.

aengine DECISION LAYER
Plan • Replan • Compare • Decide

↑ Imports projects, capacity, and budgets

↓ Pushes approved plans back

KEEP YOUR TOOLS

Planview Broadcom Clarity OnePlan Excel

Algorithms calculate

Replan the portfolio in one click, honoring dependencies, deadlines, and locks.

AI discovers

Highlights risks, bottlenecks, and trade-offs worth a closer look.

Humans decide

Accept, adjust, or lock. Approved plans flow back to your PPM.

THE DIFFERENCE

Confidence when plans change

Let the data speak

No more opinion-driven meetings. Data from PPM, strategy, finance, and work-management systems becomes one shared view, not a spreadsheet or slide deck.

Plan fast. Replan faster.

Model trade-offs and what-ifs live, in the room. When work slips or new demand lands, replan in one click and see every impacted team and budget.

From strategy to execution, without losing context

Connect OKRs to portfolios, teams to schedules, and budgets to capacity, and see how every change ripples through.

NO RIP & REPLACE

Built to complement, not replace

Keep your strategy, PPM, work-management, and financial tools. aengine imports from them, plans, and pushes approved plans back, adding:

- ✓ Executive-grade foresight
- ✓ Live change impact analysis
- ✓ Unified & safe planning space
- ✓ Bi-directional information flow
- ✓ Implemented in weeks, not months

PROVEN IN THE FIELD

**Deliver more
with less**

100x

faster portfolio decisions

THE HIDDEN DECISION TAX

The problem isn't change. It's how long it takes to understand it.

Teams rebuild scenarios, reconcile systems and hold more meetings, while leadership waits and the portfolio keeps spending. It never shows up as a budget line, so no one manages it. We call it **the hidden decision tax**.

≈21%

**of portfolio spend
lost to five levies**

Central estimate in our whitepaper,
The Hidden Tax

THE FIVE LEVIES	WHAT IT COSTS YOU	HOW aangine REMOVES IT
1 Decision latency	Money keeps flowing into work that should stop while the decision waits for the next meeting.	✓ Shows the impact of stopping, delaying or adding work in seconds, so leaders decide in the room.
2 Resource conflicts & queues	Shared experts become bottlenecks. Work sits in queues and timelines stretch.	✓ Plans against real capacity by team, role or person. One-click replan clears overloads and honors dependencies.
3 Switching costs	People spread across too many initiatives lose hours to context switching.	✓ Sequences work to the capacity teams really have, so fewer people are split across initiatives.
4 Zombie projects	Projects that would not be approved today keep consuming budget and people.	✓ Ranks every initiative against strategy, flags the lowest-value work to drop, and AI spots spend running ahead of progress.
5 Planning overhead	Annual cycles, recurring reviews and replanning cascades eat leadership and PMO time.	✓ Turns replanning into a one-click routine: compare against the baseline, decide, and push approved plans back to your PPM.

Measure your hidden decision tax in one week.

Five meters, your own data, and a conservative, central and high estimate, plus the levies to tackle first.

ABOUT CONTINUOUS SOFTWARE

Planning algorithms since 2017.

aangine is a planning-only platform, built by people who have run the plans.

From day one, our focus has been the algorithms that rebalance capacity, dependencies, budgets, timing and priorities in seconds. Delivery stays in the PPM, work-management and finance tools you already use.

Planning only, by design

One job, done deeply: plan, replan, compare and decide. No rip & replace.

25+ years each

Our leadership team brings 25+ years each in project and portfolio management, building critical decision-making systems, and consulting on large enterprise transformations.

210+ customers served

Continuous Software has served customers in 20+ countries while building aangine, across banking, telecom, manufacturing and the public sector.
